

TLV Series Crusher

TLV Series Crusher

- Film crusher is suitable for crushing and recycling PP,PE film material and sheet, PET bottle and so on. Adopt V-Shape blade design, shearing working principle instead of tearing to cut the material.
- Crushed granule in angular, low dust, reduce energy consumption increase capacity. For PP woven bag crushing can choose large skew stagger blade design.
- Folio-style crushing chamber to prevent lubricating oil pollute material; bearing external, effectively avoid dust into the bearing, prolong machine life.
- Equiped with water crushing can increase output, also can equipped with friction sander / screw feeder to achieve the primary effect of dust removal washing.

Alloy steel blade

The cutting blades is made of high-strength alloy blades steel, which has high hardness and strong wear resistance. The blade grinding can be reused.

Copper core motor

Adopt brand motor, pure copper core, low energy consumption, strong power and durable.

Brand Electrical Appliances

By controlling the actions of electrical appliances, control of machine operation and shutdown protection equipment, adjustment of work, etc. can be achieved.

Soundproof box

Thickened steel plate reduces the noise caused by particles hitting the box during crushing.
